

Planetary gear - Heavy

Vexve's bigger planetary gear is a compact, yet sturdy solution for operating valves in construction site conditions. The planetary gear is designed to be used with Vexve long stem valves instead of a T-key. The planetary gear works as a torque converter, so the valve can be operated with a small torque and the opening speed of the valve is automatically limited.

Product number:	287191
Body:	Steel
Socket:	HEX-50
Max. input (Nm):	450 Nm
Max. output (Nm):	6500 Nm
Gear reduction ratio:	18:1
Weight:	18,6 kg

NOTE: For to operate DN 100–150 long stem valves with planetary gear, valves should be supplied with a mounting flange (HEX-90, 299470) and a retaining ring (299412). Mounting flange and retaining ring can be mounted afterward.
